Cachematrix Completes Integration with Thomson Reuters' Treasury Workstations

Integration allows for automation of trade data directly into Thomson Reuters' treasury workstations

DENVER, CO, April 7, 2009 - [Cachematrix](#), the leading provider of institutional money market fund trading software for banks and financial institutions announced today that it has completed treasury workstation integrations with Thomson Reuters www.thomsonreuters.com which can be utilized by any corporation using a Cachematrix trading system licensed by banks, and a Thomson Reuters Treasury Workstation.

Corporate treasurers are placing far more emphasis on using web-based electronic trading technology for investing and managing their core and operating cash. They are also looking to automate the transmission of trade data directly into their treasury workstations. This integration, which can be initiated by contacting [Cachematrix](#) or Thomson Reuters, allows for a seamless flow of pertinent trade and reporting information automatically into Thomson Reuters' Treasura or Treasury Manager solutions. This automated feed eliminates the need for manual entry from the cash manager.

"It is critical that treasurers have the tools with which they can most effectively manage their cash and have accountability over their reporting," said Cachematrix Chief Information Officer, Matt Crooks. "In today's environment seamless integration of separate trading systems into treasury workstations should not be a barrier to effectively managing treasury operations."

"This is a great benefit for our corporate treasury clients to be able to also link to Cachematrix's [money market portal technology](#). Through this interface, our customers will be able to download money market fund positions into Treasura or Treasury Manager for a complete pre-trade, trade, and post-trade workflow", commented Ari Morris, Head of Corporate Treasury Strategy at Thomson Reuters.
